

AI Learning

Personalized learning techniques: aims, objectives, and expected outcomes

Introduction

Personalized AI-driven learning adapts instruction to individual learner needs using data and models to improve outcomes.

This presentation outlines the *aims*, *specific objectives*, and expected measurable outcomes for implementing a personalized learning technique.

01

Research Aims

Primary Aim

Develop and validate an *AI-personalized learning system* that increases learner mastery and engagement by tailoring content, pacing, and feedback.

Demonstrate statistically significant improvement in learning gains and retention across diverse learner profiles.

Specific Objectives

Design adaptive algorithms for real-time personalization and content sequencing.

Evaluate effectiveness via controlled trials with **pre/post assessments** and engagement metrics.

Assess scalability, fairness, and ethical

Success Criteria

Define measurable metrics: **improvement in assessment scores** , retention rate, and engagement time.

Establish thresholds for statistical significance and fairness across demographics.

Implement monitoring for reliability, load performance, and user satisfaction to qualify deployment readiness.

02

Expected Outcomes

Learning Gains

Demonstrable increases in mastery and retention through personalized pathways and targeted feedback.

Measure via *pre/post assessments*, longitudinal tracking, and competency-based benchmarks.

Conclusions

Summarize that an *AI-personalized learning system* can yield measurable learning gains, scalable adoption, and a roadmap for ongoing research.

Recommend phased trials, robust evaluation, and governance to ensure ethical, equitable deployment.

Thanks!
